

Anthropic met tout le monde d'accord: Claude 3 surclasse ChatGPT et Gemini!

Claude AI de Anthropic surpasses ChatGPT and Gemini in artificial intelligence

Attention, Claude AI, the innovative AI chatbot from Anthropic, challenges ChatGPT and Gemini!

The latest release of Claude AI, recently published by Anthropic, promises better performances than ChatGPT from OpenAI and Gemini from Google.

Claude 3 offers three different models: Opus, Sonnet, and Haiku. Opus and Sonnet are already available through the Claude 3 website and as an API for developers. Haiku, which is faster, will be available soon.

Studies conducted by Anthropic have shown that the Opus model of Claude 3 outperforms GPT-3.5, GPT-4, and Gemini in various key areas. Claude 3 stands out especially for its general culture, advanced academic knowledge, problem-solving in mathematics, and coding skills.

In addition to its performance, Claude 3 boasts faster response times. Sonnet, for example, is twice as fast as previous versions. Haiku, on the other hand, can read a dense document in less than three seconds.

Anthropic claims that Claude 3 is more precise and reliable than its predecessors. Tests have shown that Claude 3 models provide more correct answers and fewer errors than previous versions.

Claude 3 is also praised for its user-friendliness, ability to handle long messages, and remember previous information.

One of Claude's major improvements is its ability to analyze and summarize various types of files, such as images, PDFs, texts, Office files, CSV spreadsheets, and HTML files.

To test Claude 3, visit the Anthropic website. The Claude Pro subscription, including the Opus model, provides additional benefits for \$20 per month.
