

Les BASES de Midjourney – TUTO

Midjourney is an artificial intelligence that generates images and can be used on Discord. To get started, create a Discord account and download the app. Then, go to midjourney.com and click on “join the beta.” Midjourney will ask for your Discord credentials and send its server to your account. Once you see the Midjourney symbol, go to the “newbies” rooms and type “/imagine prompt” in the message bar. Midjourney will generate four images based on your prompt, which can be varied using the “V” buttons to create new images in the same style.

The “U” buttons can be used to upscale the quality of an image and make it appear alone. Clicking on the “web” button allows you to open and save the image to your computer. To generate more specific images, you can use prompts that include style descriptions such as “oil painting.” In future videos, the different parameters available in prompts will be explored for more precise and spectacular renderings.
